Jaguar plc

FROM THE OFFICE OF THE CHAIRMAN AND CHIEF EXECUTIVE

Sir John Egan

Browns Lane Allesley Coventry CV5 9DR England

Telephone: 0203 402121 Telex: 31622

11th May 1988

The Rt Hon Mrs Margaret Thatcher, MP Prime Minister 10 Downing Street LONDON SW1 A2AA

Dear Prime Minister

Thank you very much for inviting me to the dinner in honour of the Japanese Prime Minister; it was a thoroughly enjoyable evening and encouraging because of also the growing self-confidence and obvious sense of purpose of British industrialists. It is becoming clear that the growing Japanese investment in the UK, coupled with a more receptive attitude towards change on the part of British businessmen, could result in our being the first European country to really learn from the Japanese managerial revolution.

You were kind enough to ask how Jaguar was progressing. We are working hard to improve our business, but are currently under enormous threat from the exchange rates, particularly the relationship between sterling and the US dollar. Put simply, at today's rates of approaching \$1.90 to the f, and with current levels of efficiency, we would be trading at little better than break-even. Our hedging policy has given us a further 15 months of acceptable currency rates, at the end of which time we will have to have achieved a 50% increase in productivity in order to maintain satisfactory levels of profitability. Clearly an improvement of this magntitude will require radical changes in our business. Whilst the vast majority of our workforce understand this and are generally sympathetic to our ideas and objectives, their Trades Unions still drag their feet. In our recent campaign to improve productivity at our Browns Lane plant, the first action of the union movement was to ballot their members for a strike mandate on the basis that this would secure a stronger bargaining position. Against the background of a number of high profile disputes in the UK motor industry in the last few months, this action generated a lot of unwelcome publicity for Detailed discussions then followed, and we modified a us. number of our proposals in line with the views expressed by our employees who eventually accepted the position.

> Registered Office Browns Lane Allesley Coventry CV5 9DR

As a general principle, I believe that industrial relations legislation should specify that any ballot on strike action be conducted on a specific proposal, or set of conditions rather than be used as a form of open-ended bargaining counter for the unions before serious negotiations start. A Judge or Court could then order a re-ballot if conditions have materially altered.

I believe Britain's industrial renaissance is still a little fragile and many of the large exporters will need help on exchange rates for some time yet. We are striving to be world class but our system still slows down our ability to change rapidly enough if exchange rates move too quickly.

Yours sincerely

BETOM ~ 2919 30 9

Add 12 May 1988

I enclose a letter dated ll May from Sir John Egan, Chairman of Jaguar, to the Prime Minister. I should be most grateful if you could let me have a contribution to a draft reply covering the point Sir John raises in his penultimate paragraph concerning industrial relations legislation.

I should be grateful if Moira Wallace (Chancellor's office) could let me have a contribution on Sir John's comments on the exchange rate.

It would be helpful to have these contributions by Thursday 26 May.

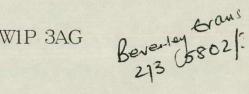

(PAUL GRAY)

Nicholas Wilson, Esq., Department of Employment.

LONDON

Dear Print

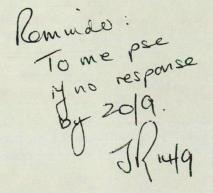

You sent me a copy of your letter of 12 May to Nicholas Wilson covering Sir John Egan's letter to the Prime Minister.

I enclose a contribution on exchange rates for the Prime Minister's reply.

Yaurs,

Mor

MOIRA WALLACE Private Secretary

### CONTRIBUTION TO LETTER FROM PRIME MINISTER TO SIR JOHN EGAN

"You also commented on the problems you faced because of the rise in sterling's exchange rate, particularly against the dollar. I do, of course, recognise your concerns. Since you wrote, we have cut interest rates by a further  $\frac{1}{2}$  per cent, and I set out our policy fully in the House of Commons on 17 May."

CONFIDENTIAL

ECU TREASURY BILL PROGRAMME

The Bank have now worked up more detailed proposals for the ecu bill programme in the attached draft information memorandum which takes account of a number of our comments. Applications have been received from 13 UK banks to act as market-makers and, subject to your clearance, the Bank would like to use the attached draft as a basis for talks with a number of European and US banks next week. We may have further detailed comments on the memorandum, but we are broadly content with it as it stands and recommend that the Bank be allowed to proceed subject to making the amendment mentioned in paragraph 2(i) below. The Bank intend to be ready to publish a final memorandum by 16 September, before the informal ECOFIN.

2. The main points you might like to note are:

(i) tax - the Revenue have said that they do not propose to deduct tax at source. Since a commitment on future tax cannot be given the text will need to read "any taxes" rather than "any present or future taxes".

(ii) replacement currency - in the event that the ecu ceases to exist as the unit of account of the EMCF, holders of the bills may opt to receive the equivalent ecu amount of a replacement currency nominated by the Bank as Paying Agent. This means either the US dollar or a component currency of the ecu which is freely usable (ie sterling, the deutschemark or the French franc);

#### CONFIDENTIAL

(iii) method of tender - this section sets out the rules for the first seven tenders, which will be on a bid-price basis, over the period to April 1989. The rules and indeed the whole memorandum could be revised after that in the light of experience;

(iv) market makers - the only unexpected omission from the list so far is Kleinwort Benson who apparently do not want to develop their short-term money market operations. Apart from 13 UK banks, the other market-makers are expected to include approximately 12 EC banks, 7 US securities houses and banks and 3 Swiss banks. There will be no Japanese market-makers, as agreed in response to Sir G Littler's minute to you of 22 August;

(v) secondary market liquidity - market-makers are required to provide active support at the initial series of tenders and to act as market-makers to ensure liquidity in the secondary market. In return, the Bank will only sell bills taken into its portfolio into the secondary market through market-makers and, at least initially, undertake to make a price for any bills that they may offer to the Bank.

3. We think that this kind of market support operation, which is akin to arrangements in the sterling Treasury bill market, is necessary at least in the initial stages of the development of the ecu bill market. The Bank will make below-market prices to discourage indiscriminate selling of the bills. They will be held outside the EEA so that buying in will lead to a reduction in the reserves. We might want to reconsider these support operations after the initial series of tenders, but there is an argument for continuing with them because the bills cannot count as primary liquidity for banks if they are not rediscountable.

4. Are you content with our recommendation that the Bank use this draft of the memorandum amended as proposed in para 2(i) as a basis for further consultation with overseas banks and securities houses?

N P WILLIAMS

## US FINANCIAL DEVELOPMENTS

The latest weekly summary of developments in monetary policy and the financial markets is attached.

International Division Group 1, HO-3 5 September 1988

R T Thorne (4385)

5. 9.88

- Friday's weaker than expected employment data caused earlier speculation of an imminent further tightening in Fed policy to evaporate, and also caused bill rates to fall by 10 bp and long-term bond rates to fall by 25 bp. However, speculation in some quarters that the Fed's action already this year may have succeeded in slowing the economy sufficiently to avoid accelerating inflation seems to be premature, and the market may have overreacted to the employment data. The dollar showed some weakness following Friday's fall in interest rates.
- Before the data's release, there were reports that the split between regional Fed Presidents and some Fed Governors over the speed of Fed tightening was continuing. There were reported signs that new Fed Governor John LaWare may side with the regional Presidents in the dispute.
- Fed reserves policy remained stable last week, although technical factors have placed some pressure on reserves over the last couple of days.

## (a) No Fed action likely

Last Friday's weaker than expected employment data abruptly changed the market's mood, from fear of further Fed tightening to talk that the Fed's action already this year may have succeeded in slowing the economy sufficiently to avoid accelerating inflation. Such talk is surely premature, based as it is on little more than a single economic release, but analysts had invested the employment data with great significance, not least in the Fed decision-making process. The Fed may indeed regard the moderation in employment growth with some satisfaction.

2 Despite this latest development, it still seems likely that in the coming months pressure will again begin to build for a tightening of policy. Earlier last week there were reports that the split on the FOMC between regional Fed Presidents and some Fed Governors over the speed with which rates should be tightened was continuing. The regional Presidents might be said to have won one round with the unanimous FRB decision last month to raise the discount rate, but the latest data has gone some way to evening the score.

3 The regional Presidents tend to watch economic indicators, and have been alarmed by signs of capacity pressures and of an upturn in wages in recent months. Several of the Governors, notably Johnson, Seger and Angell, are said to pay more attention to the three financial indicators that Johnson made a wide-reportedly speech about in February, but which have since seemed to play only a back-seat role in policy: they are the dollar, commodity prices and the yield curve. With the dollar strong over the last few months and the yield curve having flattened, the financial indicators have not pointed to the need for tightening, and even the commodity price strength this year has been partly attributable to the drought, the effects of which should be discounted, according to Governor Angell.

4 An interview with the newly appointed Fed Governor, John LaWare, last week gave some clues as to where he is likely to stand in the debate. LaWare has been appointed for his banking, rather than economic, expertise, and has been reported not to have particularly forthright views on monetary policy. The broad thrust of his remarks in the interview indicated support for current Fed policy, including possible tightening in future if capacity constraints continue. Although he said that he looks at both economic and financial data before forming views on policy, the tenor of his remarks were reported to suggest that he puts more weight on economic data and so may possibly side with the regional Presidents. When the minutes of the August FOMC meeting (the first he has attended) are released later this month, they may provide further evidence of his position if there was a split vote.

## (b) International policy co-ordination

5 The Japanese decision so far not to follow West Germany's 1/2% point increase in the discount rate has raised press speculation of a policy split between the two countries over the dollar's value. In the absence of any US official comment on the subject, press opinion has been divided over which side the US might take in such a dispute. Some say that the US and Japan have bilaterally agreed to support the dollar, not least because of the forthcoming Presidential election, and that the US is privately annoyed with West Germany that it has tightened policy and hence restrained domestic growth. Others see the US as on West Germany's side in wishing to avoid a counterproductively large dollar rise, with Japan failing to co-operate in the intervention. There seems to be little firm evidence behind either story.

#### MONEY

5 Ml and M2 both rose by a brisk 0.2% in the week ending 22 August, following a slight fall in the week before. Ml rose by a sharp 0.4%, which was nevertheless close to market expectations and followed declines in the two previous weeks.

#### RESERVES AND POLICY IMPLEMENTATION

6 Average adjustment and seasonal borrowing from the Fed's discount window rose by \$53 mn to \$645 mn in the week ending 31 August. Although this was above the previously perceived \$550-600 mn Fed target, Fed policy was seen as having been 2

steady. The high level of borrowing was instead attributed by some to high levels of seasonal discount window borrowing, particularly by agricultural banks, whose loans to farmers are at a seasonal peak just before funds from the harvest enable them to be repayed. The peak is likely to have been exacerbated by the effects of the drought.

7 The current target for the Fed funds rate is seen as being 8-8 1/4%, but the rate has run at the top end of that range in the last couple of days for technical reasons, causing the Fed to add reserves modestly. The normal pressure on reserves over the Labour Day weekend because of high cash withdrawals was supplemented by banks' need to find funds to pay for the Treasury cash management bill auctioned early last week and for substantial social security payments.

## MARKET DEVELOPMENTS (29 August-2 September)

8 On Friday, Treasury bond yields dropped by about 25 bp, the biggest single-day fall since January, in response to the weaker than expected August employment data, which prompted speculation that inflationary pressures might have started to ease. Bill rates fell by 10 bp also, as earlier speculation that the Fed might further tighten evaporated. The most striking element of the employment data was the 0.2% point rise in the unemployment rate, although this series can be volatile. The downward revision to July payroll employment and the weak August average workweek and hourly pay data reinforced the figure's message, but nevertheless some said that the market overreacted to the data.

9 Earlier in the week, long rates had fallen by 10-15 bp in response to the dollar's strength. The dollar had risen particularly strongly against the yen, prompted by the Japanese authorities' failure either to raise the discount rate or to intervene in the foreign exchange market. Although the dollar subsequently showed some weakness against the deutschemark following the fall in interest rates on Friday, the yen's continued weakness limited the dollar's losses against that

| GILTS opened better  | on stronger sterli | ng.Shorts and mediu | ms were 1/4 firmer | and longs 3/8      |

and all sectors had gained a further 1/8 by midday. The afternoon saw little retail interest and some foreign selling at the higher levels. The market sold off to close with shorts only 1/8 better, mediums 1/8 to 1/4 and longs 1/16.

INDEXED LINKED were up to a 1/4 better at one stage, but closed unchanged to 1/8 easier.

EQUITIES staged a technical rally this morning but closed off the best as Wall Street lost most of its opening gains.

6 September 1988

Ken Smith Esq Institute of Economic Affairs 2 Lord North Street WESTMINSTER SW1P 3LB

Dear Mr Smith

"THE STATE OF THE MARKET"

You asked me a few days ago for a reference for the Chancellor's quotation from the official Chinese newspaper, in the conclusion of his lecture on "The State of the Market".

The Anglicised version of the name of the newspaper is Renmin <u>Ribao</u>. The Chancellor spotted the quotation in the IMF Press Summary for 12 July 1988, but we do not know for certain whether the quotation featured in that day's issue of the paper, or perhaps a few days earlier, and to check it would be difficult. Are you content for the footnote to say, <u>"Renmin Ribao</u>, July 1988"?

Yours sincerely, Andrew Hudson

A P HUDSON

1. MISS O'MARA Mon ga

2. ECONOMIC SECRETARY

Chancellor Paymaster General Sir G Littler Mr Lankester Mr Scholar Mr Peretz Mr Gilhooly Mr Ilett Mr Mortimer Miss Noble Mr Watts Mr Devereux Mr Parkinson Mr Nelson

Mrs Dayer T.Sol Mr Milne Bank Mr O'Connor IR

#### ECU TREASURY BILL PROGRAMME

You may like to see for information a revised version of the Bank's information memorandum (copy attached) which takes account of the Chancellor's amendments, and is intended for publication next week.

2. The memorandum now includes a list of market-makers on page 8, comprising 13 UK banks, 7 EC banks, 5 US banks and securities houses and 3 Swiss banks. There are no Japanese market-makers, as agreed by the Chancellor.

3. The Bank wish to print the memorandum tomorrow. The one point that we feel we should draw to your attention is the ordering of market-makers, with UK banks first. The Bank's Gilt-Edged Division think that it would be natural to put UK banks first, that it is an important marketing point and that foreign-owned market-makers would be neither surprised nor offended by the ordering. However, this does, of course, play down the European nature of the programme, especially when we are hoping some European governments may wish to make use of the market in London. This problem could be avoided by putting all market-makers in alphabetical order.

This afternoon saw a modest rally, all be it on low turnover, prices finished below the best as the pound softened late in the day. Conventionals closed 1/8-1/4 firmer throughout.

SECRET

INDEX-LINKED shorts were softer but the longer issues put on 1/4-3/8.

EQUITIES opened firmer and moved in a narrow range thereafter in very quite trading conditions. The provisional retail sales increase for August of 0.5% and the producer price figures were inline with market expectations.

## US FINANCIAL DEVELOPMENTS

The latest weekly summary of developments in monetary policy and the financial markets is attached.

International Division Group 1, HO-3 13 September 1988

R T Thorne (4385)

## SUMMARY: 5-11 SEPTEMBER

- The G7 meeting in West Berlin is said by officials to be likely simply to reaffirm the existing understandings on policy co-ordination and on exchange rates.
- Assistant Treasury Secretary Mulford confirmed a press report last week that he had made a secret trip to Europe in August to reaffirm the US commitment to the current G7 exchange rate and policy co-ordination agreements following Baker's resignation.
- The New York Fed reported that it bought \$2.93 bn of deutschemarks in the foreign exchange markets in the May-July quarter, intervening many times in late June and July. It also attributed the dollar's rise which provoked the intervention partly to the impression given by the Economic Declaration and officials' comments following the Toronto Summit that the G7 would tolerate a further dollar rise.
- Various Fed members confirmed the market's view that the August employment data have removed the possibility of a further Fed tightening at this stage.
- The latest 'tan book' from the Federal Reserve Districts indicates that demand pressures are starting to slacken in some parts of the economy, but the picture varied considerably between different regions and different industries. It seems likely to bolster the case at the next FOMC meeting against tightening further.
- Japan's largest inter-dealer broker announced plans to broker US Treasury bonds in Tokyo, settling the deals in dollars in New York.
- The Treasury yield curve flattened very slightly last week as oil prices fell and a purchasing managers' survey was weaker than the previous month. The dollar was stable against the deutschemark but fell against the yen as the Bank of Japan said it was ready to defend the yen's value if necessary.

### (a) The US and international co-operation

There have been comments from many sources that the G7 meeting 1 which will precede the IMF-World Bank meetings in West Berlin on 22 September will introduce no new policy initiatives, but will limit itself to a reaffirmation of the existing understandings on policy co-ordination and on exchange rates. One reason for the absence of new initiatives is the difficulty of committing the US to new policies in advance of the Presidential elections. Fed Governor Robert Heller was one of those who said that no major programmes would be presented at the meeting. Although trade imbalances were being slowly corrected, he said, the US had hoped for faster economic growth in other countries. Nevertheless "the figures in Europe are not bad; we can't complain." (West Germany's Q2 GNP figure released last week was better than expected, being 3.4% above a year earlier.)

Meanwhile, the Wall Street Journal reported last week that 2 Assistant Treasury Secretary David Mulford made a secret trip to Europe last month to reaffirm the US commitment to the G7 exchange rate and policy co-ordination agreements following Baker's resignation. Mulford confirmed that the report was basically accurate, but did not confirm all the details. According to the report, Mulford visited the UK, West Germany and France to make the reaffirmation, with the approval of Alan Greenspan, Baker and Treasury Secretary-designate Nicholas Brady, and also contacted Japanese officials with the same message. The visit was just after the US discount rate increase had caused the dollar to rise in the short-term and there had been an upsurge in market speculation that the US and Japan had a bilateral agreement to keep the dollar firm until after the Presidential election. More recently, there have been reports that the dollar's fall against the deutschemark since West Germany's own discount rate rise have helped to ease friction between the US and Europe.

#### (b) New York Fed intervention

3 The Federal Reserve Bank of New York reported that it made \$2.93 bn of dollar sales in the May-July quarter, the largest amount of quarterly dollar sales since the quarter in which the 1985 Plaza agreement was made. The New York Fed's intervention was on 16 different days between 27 June, when the dollar was at DM 1.819, and 31 July, when it finished at DM 1.878, and it consisted entirely of deutschemark purchases. Of the \$2.93 bn, \$1.32 bn was sold on behalf of the Fed and \$1.61 bn on behalf of the Treasury's Exchange Stabiliasation Fund.

4 The report accompanying the figures said that the Economic Declaration issued after the Toronto Summit had left the market with the impression that the G7 would tolerate a further rise in the dollar, as did comments by several officials at the time. (The Declaration's remarks on the dollar were identical to those in the December statement, but the deutschemark had fallen by 8% since that time. Given this feeling, it may be that the US will think that the wording of the public statement to follow this month's meeting should suggest a tougher attitude to dollar strength, even if the existing private understanding on exchange rates is left unchanged. Perhaps wording that describes a dollar rise or fall as equally counterproductive even be suggested.) The continuing buoyancy of the US economy at that time together with a perception that the Fed would tighten if there were signs of further inflationary problems added to the upward pressure on the dollar, and led to the conditions which made intervention necessary, the New York Fed said. The intervention had taken place as part of the G7 agreement.

#### (c) Domestic monetary policy

5 Various Fed Board members effectively confirmed the market's view that the August employment data have removed the possibility of a further Fed tightening at this stage. Governors Johnson, Heller and LaWare all said that economic growth appeared to be moderating, and both Heller and LaWare saw no need for a change in Fed policy at the moment. (A few market commentators had suggested that the Fed might even ease, but there is no sign whatsoever of that.)

## (d) The tan book

The latest Federal Reserve Districts' Commentary on Current 6 Economic Conditions (the "tan book") found that demand pressures are starting to slacken in some parts of the economy, and thus seems likely to bolster the case at the next FOMC meeting against tightening further. However the picture varied considerably across the country, with healthy expansion in business activity in some areas, "stable to mixed" conditions in others and even weakness in the St Louis Fed District. Activity was said to be expanding in numerous manufacturing industries, but the retailing and construction sectors were generally weak. Similarly, information on price pressures was mixed, with the prices of many raw materials and industrial components climbing strongly, but wage rises still rather patchy, affecting retailers much more than The most concrete evidence to support a possible manufacturers. moderation in labour pressures was provided by the Philadelphia Fed, which reported the first pause in employment growth for 16 months.

# (e) US Treasury bond trading in Japan

7 Japan's inter-dealer broker, Japan Securities Clearing Group, announced plans to broker US Treasury bonds in Tokyo. It will concentrate on 10- and 30-year maturities and will aim its business primarily at Japanese clients. Settlement, which will reportedly be through Bank of Tokyo's New York unit, will in principle be in dollars but could be in yen if buyer and seller agree.

### MONEY AND CREDIT

8 M1 and M2 both fell by 0.1% or less in the week ending 29 August, while M3 rose by 0.1%. In addition, the previous week's M3 figure was revised up 0.4%, and the aggregate's four-weekly average is now 6.6% (ar) above its target base, up from 6.4% the week before.

9 Consumer instalment credit rose 5.0% (ar) in July, well below the consensus forecast of about 8%, but June's increase was revised up to 16.4% from 10.2%. The series has risen by 9.4% over the last year.

#### RESERVES

10 Average adjustment and seasonal borrowing from the Fed's discount window fell by \$68 mn to \$577 mn in the week ending 7 September, the second week of the maintenance fortnight, bringing the fortnightly average to \$611 mn, up \$37 mn from the previous fortnight. Analysts continued to believe that the Fed was maintaining a steady credit stance in the wake of the weaker than expected August employment data, but they seem to have slightly increased their estimate of the degree of tightness involved in that steady stance. The consensus discount window borrowing has drifted up from \$550-600 mn to \$600 mn, while the Fed funds target estimate has narrowed from 8-8 1/4% to 8 1/8-1/4%.

11 The Fed had a large net miss in its estimate of reserves availability on Tuesday last week. Until this became known later in the week, some analysts had suspected that the Fed might have eased slightly in response to the employment figures when it added reserves to the market with Fed funds at 8 1/16%. However, the Fed helped to make it clear that its action was purely technical when it drained funds back out of the system again on Wednesday with Fed funds at 7 3/4%.

#### MARKET DEVELOPMENTS (5-9 September)

12 The Treasury yield curve flattened very slightly last week as long bond yields drifted down by about 5 bp, while bill rates ended the week little changed. Although the August producer price index was the week's major economic indicator, it was much as expected and had little market impact. Instead, the weak oil price and a decline in confidence (albeit from a high level) revealed by the National Association of Purchasing Managers survey were the factors most responsible for the strength of the long end of the market.

13 The dollar, meanwhile, attracted little attention last week, but fell by 2 yen because of Bank of Japan Governor Sumita's comments that his institution was ready to take action to defend the yen's value if necessary. This week, the US markets will focus on July's US trade deficit figure, which comes out on Wednesday and for which the consensus market forecast is \$11.5 bn, down from \$12.5 bn in the previous month.

## TREASURY AUCTIONS

Monday 12 September

Auction of \$14.0 bn of three-and six-month bills, raising \$625 mn of new cash.

INDEX-LINKED met good demand, longs gained 1/4 and shorts 1/2. The latter gaining on forecasts of inflation at or above 7% by early next year. EQUITIES after mixed opening the market eased ahead but slipped back on news of 9% annual increase in average earnings. Since then prices have gradually drifted easier.

SECRET

INDEXED LINKED were bid from the start and gained up to 3/8 at one stage. Sellers appeared at the higher levels but the market was still 1/4 better at the close.

EQUITIES opened easier in anticipation of a sharp increase in the RPI.Prices recovered some of the lost ground prior to the announcement which showed that annual inflation had jumped to 5.7%; the PSBR surplus for August of 1.5bn was largely ignored.The Account closed in moderate trading at just below's Thursday's close

#### MARKET COMMENT

GILTS opened easier, down 1/8 throughout, the market drifted off during a very quiet day to close 1/4 down throughout.

INDEX-LINKED opened firmer, shorts up 1/8 and longs 1/2, but fell away with profit taking at the longer end; shorts closed up 1/4 and longs 1/8 better.

EQUITIES were quietly steady until a weak Wall Street, reacting to lower U.S. Bonds, forced prices lower.
