Remarks: The dollar has lost its earlier gains + dragged sterling back with it. Nevertheless, the pound is stronger in Europe than before the weekend. Trading has been light.

After a strong mid-session, encouraged by higher Eurodollar rates, the dollar retreated + is now virtually where it opened the day, in spite of firm Fed Funds (20%). However, interest rates are tending down again + the latest Fed Funds rate is below 18%. The Germans sold \$115mm, mostly for Fed account. EMS is 2 $\frac{1}{2}$ % between Belgium (31.16) + Holland (2.10). The Italians bought \$50mm. Dollar's gain from Friday about 1%.

Eurodollar close at 18 $\frac{1}{2}$ %. Interbank £ 14 $\frac{1}{2}$ %. Covered differential at par.

Gold steady.
