CHARGE CAPPING 1990/91

As you know, the meeting of E(LG) tomorrow has been cancelled and in its place an informal group of Ministers is to meet to consider this issue.

I therefore enclose a draft of the E(LG) paper which my Secretary of State had it in mind to circulate to that sub-committee, which, as we agreed, will now serve as the basis for discussion by the informal group tomorrow.

Copies of this letter and the paper go to the private secretaries, to the Lord President; the Chancellor of the Exchequer; the Chief Secretary; the Home Secretary; the Secretaries of State for Education and Science; Social Security, Health and Transport; the Chancellor of the Duchy of Lancaster; the Solicitor General; the Chief Whip and Sir Robin Butler.

CABINET

MINISTERIAL STERING COMMITTEE ON ECONOMIC STRATEGY

SUB-COMMITTEE ON LOCAL GOVERNMENT

COMMUNITY CHARGE CAPPING 1990/91

Memorandum by the Secretary of State for the Environment

- 1. This paper sets out my proposals on theree, capping for 1990/91. We need to decide:
- whether any authorities should be capped; and
- the criteria for selecting individual authorities:
- the size of the cap we should propose for each selected authority.

Authorities' spending and charges

2. The now have details of all authorities' budgets. Overall, authorities are raising £3bn more from chargepayers than we assumed then we set Total Standard Spending for 1990/91 at £32.8bn. The average charge is £363. The average for shire areas is £360, for metropolitan areas £366, and in London, the average is £371. If all authorities had budgeted in line with 3SAs the average charge would be around £273 (£278 before Llowing for special grants).

Use of capping powers in 1990/91

- 3. Our capping powers enable us to require an authority which has budgeted excessively to reduce that budget with a consequent reduction in community charges. A description of the capping process is at lonex A. Our public stance has been that if authorities budget excessively we shall cap them.
- 4. By capping we can give chargepayers in selected authorities lower charges, which will undoubtedly be welcomed. And it will not only have an effect this year. It will also be a warning to authorities for the future that even if they are prepared to risk the direct accountability pressures in our new system, they will not be able to spend up with impunity. But we cannot look to capping which attacks individual authorities' budgets on a selective basis, as a remedy for the macro economic problems of the £3bn local authority overspend. Indeed, the toughest capping option I judge we could safely adopt would give public expenditure savings of only £250m, although it would help some 4.3 million chargepayers. Nor as illustrated in Annex B can we look to capping to be a universal panacea for the problem of charges being higher than the public expected.

Any capping scheme has considerable presentational and actitical drawbacks. Most importantly, as explained in Annex More will inevitably be anomalies, in particular where due to the safety net and special grants some authorities with low charges leg under my options Calderdale with a charge of £297) may be tapped, while authorities with considerably higher charges (eg South Oxfordshire with a charge of £456) may not be capped. We shall face attack that capping is an admission that our new/system of improved accountability has failed, that we are not prepared to trust in the judgement of voters at the local elections, and that by requiring authorities to revise their budgets and issue fresh bills (necessitating the reassessment of community charge benefit) we are creating administrative chaos and expense for authorities. The very act of capping will containe to keep the community charge, and the Government's involvement with it, very much in the public eye right through to the sammer recess when we shall be announcing our proposals (107) the 1991/92 Settlement, and possibly beyond. We are also ally to be faced with capped authorities publicly arguing that your caps are forcing them to make cuts in highly sensitive areas and damaging our own important initiatives in fields such as social services and Finally, over time the chosen criteria will indicate to authorities the level up to which they can safely budget, and in future years a number of authorities can be expected to increase their spending to that level.

6. Nonetheless, I believe we have little option but to cap the budgets of the highest spending authorities. We have always recognised that in the first year of the new system there might be need for capping given that the accountability pressures would not be fully in place, and the events have shown this to be the case.

Selection of authorities for capping

7 In considering the selection of authorities for capping I am particularly concerned that the criteria should be robust to Recal challenge. There will inevitably be challenges and it is most important that we maintain the excellent record of success that we have had with ratecapping. A successful challenge to the validity of SSAs, for example, would not only create great difficulties for capping itself but could jeopardise the Revenue Support Grant settlement that we have made. The need for robust criteria has been a major consideration in my approach to selection.

- 8. The statute provides that I may select authorities whose budgets are in my opinion on the basis of general principles either excessive, or represent an excessive increase over the previous year, but I am not empowered to select any authority whose budget is below a threshold of £15m. Overspending comes home to the community charge payer as the amount in £s per head by which his charge exceeds that for spending at SSA, and I believe that a measure of overspending in these terms should be our main criterion. However, to be legally secure I believe that we must also measure overspending against SSA in percentage terms. I have identified 2 options using this approach.
- 9. My first option is that an authority's butget (subject to special adjustment for inner London Boroughs to ablow for ILEA abolition, and for the City of London) should be judged excessive if it exceeds its Standard Spending Assessment (SSA) by more than 12½% (the lowest criterion we used for rate capping) and by more than £100 per adult. Under my second option an authority's budget would be judged excessive it it exceeds its SSA by more than 12½% and by more than £13 per adult. These are illustrated in tables A and B respectively

In both cases there is the proviso that the budget is at the part £26 per adult above the threshold. The purpose of this is an ensure that we cap only those authorities where the maximum possible reduction in the community charges is worth the inevitable cost of revising budgets and issuing fresh bills. The surry Counsel has advised that we cannot require an authority to reduce its budget below the selection criteria used as a benchmark to judge excessivity. I conclude that unless the maximum possible reduction is at least £26 (50 pence per week off the bill) an authority should not be capped. If we were to cap authorities for smaller reductions I believe we would be a laughing stock.

- 11. Option 1 selects 19 authorities and brings help to 3.6 million chargepayers. At could secure reduction in General Government Expenditure (SEE) of about £200m. Option 2 selects 21 authorities, assists 4 million chargepayers and could secure reduction of £250m in GEE. Table C shows the results of these options in the context of all authorities' charges.
- The options I am putting forward are I believe the 12. toughest we can adopt consistent with the aim of giving as much help as practicable to charge payers, whilst at the same time minimising the risk of successful legal challenge. Under rate capping we never capped an authority budgeting less than 1228 above its grant related expenditure assessment (GRE) the equivalent of SSA in the old system - given the inherent approximations of GREs. If we were now to cap below the 1228 margin we would need to argue successfully any legal challenge that SSAs were more accurate and precise than their predecessor GREs. I do not believe we could sustain such an argument. It would also be difficult to argue that an extra amount of less than £75 on a community charge would be an inordinate burden when our own safety net arrangements of ladd up this amount on a charge. But an overspend of anything more than £75 could probably be seen as a significant burden or

chargepayers, and hence <u>I propose we should adopt my second</u> toucher option. Compared with my first option two additional authorities are caught - Avon and Bristol.

13. As explained in Annex D I believe that to have adopted some different approach to selection - for example, different criteria for the districts and shire counties, or selecting authorities of reference to the increase in their budgets over 1989/90 - would very significantly increase the risks of successful legal challenge to our selection decisions without any real gains.

Proposed caps

- 14. Each authority's 200 that is, the alternative, lower budget figure which to propose needs to reflect its individual circumstances and be realistic and achievable. Treasury Counsel has advised that an authority cannot be capped to below the level at which it is selected for capping the higher of the 12½ or fix per adult under the option I propose we adopt; nor can an authority be capped to below £15m (the threshold below which authorities are exempt from capping).
- 15. I am approaching the setting of caps by first considering in the light of all the information available to me about the authorities' circumstances whether the maximum possible reduction suggested by the selection criteria reasonably achievable. In the case of 12 captagrities my preliminary view is that this is the case, proposing caps accordingly. For the remaining 9 authorities my preliminary conclusion is that the maximum reductions are not achievable without severe disruption to services possible financial collapse. In these cases my intention is propose caps that will require smaller but tough reductions Table B shows my preliminary views on proposed caps and their likely effects on the actual community charges. In total these proposed caps would yield savings in GGE of £250m and

reduce the average community charge from £363 to £356. I propose in consultation with colleagues to finalise proposed caps over the next few days.

Concrusion

- My/ proposal will mean that we cap 21 authorities, saving in total \$2500, and giving reductions in the community charges ranging from \$26 to £100. This will be welcomed by the chargepayers Concerned. But inevitably there will disappointment in other areas where the authorities are not capped and the charges are high. It will be difficult to explain why we have capped, although with good reason, some authorities with charges considerably below others which have We shall have to be prepared to defend not been capped. ourselves against attack on the one hand that by capping 21 authorities we are admitting our new system of accountability has failed and we are creating administrative chaos for authorities, and on the other hand that by capping only 21 authorities we have failed to live up to our pledge to protect chargepayers from excessive budgets
- 17. If colleagues agree my proposals would wish to announce my decisions by a Parliamentary statement on 3 April and formally to designate the selected authorities on that day. This will ensure that the 28 day period during which authorities may respond to their proposed caps, ends before the local elections on 3 May as I proposed in my minute of 5 February to the Prime Minister.
- 18. Colleagues are invited to agree:
 - (i) that I should use my capping powers for 1990/91;
 - (ii) that the authorities (shown in <u>Table B</u>) should be selected whose budgets are more than 12 above SSA and more than £75 per adult above

CONFIDENTIAL

SSA, provided that the budget is at least £26 per adult above the $12\frac{1}{2}\%/£75$ per adult criterion;

that in consultation with colleagues I should finalise my proposals for caps for these authorities.

CONFIDENTIAL

ANNEX A

CHARGE CAPPING PROCEDURE

- 1. Charge capping is an "in year" system. This contrasts with rate capping which was a pre-year system. Pre-year capping meant that if an authority was not capped for the year on the basis of its expenditure in previous year there was no limit on the rate or precept it could set (other than the risk of its leading to capping in the following year). This created a particular loophole which enabled some authorities to get away for one year with very large rate increases eg Hammersmith & Fulham in 1987/88 some 127%, and Ealing in the same year with 72%. Our inability to act led to a good deal of criticism from local residents and their MPs.
- 2. Under charge capping authorities first set their budgets and submit information about them to the Secretary of State. If on the basis of general principles applicable to classes of authorities he decides that an authority's budget is excessive, or represents an excessive increase over the previous year, the Secretary of State designates it for capping and proposes a maximum limit for the budget (the cap). For these purposes the budget is expressed in terms of an authority's demand on the collection fund in the case of a charging authority or aggregate precepts in the case of a precepting authority (ie the expenditure net of income such as specific grants and fees and charges.) Authorities whose budgets are under £15m are exempt.
- 3. Authorities are notified of their selection and the caps proposed at the same time. Caps are not set on the basis of general principles but have to take account of the individual circumstances of the authorities concerned. Authorities have 28 days to respond. If the authority accepts the proposed cap the Secretary of state confirms it. If the authority proposes a different figure, the cap is set by Order and may be higher

or lower than or the same as the originally proposed figure. Where the Secretary of State agrees to a higher cap than that which he originally proposed for an authority he may impose conditions about its expenditure and financial management. If the authority does not respond, the cap is likewise set by Order but must be at the originally proposed level. The Orders are subject to Commons Affirmative resolution procedure.

- 4. Once the cap is set the authority has 21 days to reduce its budget and the revised budget feeds through into reduced community charges.
- 5. A summary of the charge capping procedure is at (i). At (ii) is a separate chart showing the process from the perspective of the Government, local authorities and the public and how these interact.

DEPARTMENT OF THE ENVIRONMENT 26 March 1990

CHARGE CAPPING PROCEDURE

MARCH/ APRIL

- Authorities send budget information (Deadline: <u>18 March</u>) and charge information (Deadline: <u>2 April</u>).
- S of S <u>designates</u> authorities for capping if on basis of <u>general principles</u> applicable to classes of authorities he considers budgets <u>excessive</u> (or <u>excessive increase</u> over previous year). [Authorities with budgets under £15m exempt.]
- S of S proposes maximum budget limits (<u>caps</u>) for each designated authority on basis of <u>what is reasonable in individual circumstances</u>, i.e. not general principles.
- Notices to authorities informing them of designation, principles and proposed caps issue 3 April.

MAY/ JUNE

- Authorities 28 days to reply: Deadline: 1 May
 - (i) If authority accepts: S of S confirms by notice.
 - (ii) If no answer: cap set by Order at level S of S proposed.
 - (iii) If <u>different cap proposed</u>: S of S considers. Cap set by Order at same, higher or lower level than the S of S proposed.

LOCAL ELECTIONS 3 MAY.

- Orders: Commons affirmative resolution: May/June.
- Notices confirming caps in Orders: May/June.
- If S of S raises limit he may impose <u>conditions</u> on expenditure or financial management by means of notice.

JUNE/

- Authority has 21 days after cap set to reduce budget.
- Lower budgets feed through to <u>lower charges</u>. Authorities issue substitute charge <u>demands</u>: <u>June/July</u>.

TIMING	GOVERNMENT	LOCAL AUTHORITY	PUBLIC
MAR/APR	Secretary of State considers budget information, selects authorities and proposes caps: announcement on 3 April.	Sets <u>budget</u> in March and tells DoE. Preceptors issue precepts to charging authorities, which issue <u>charges</u> by 1 April.	Receive charge bills end March/ beginning April. May pay in lump sum or by instalments. First instalment due April or
		If authority is capped it considers whether and how to respond within 28 day period. If challenging cap it will consider what alternative amount to propose to the Secretary of State and reasons for it and what further information (if any) to submit to support case. Authority may seek meeting with Ministers.	May. Chargepayers continue to pay charge initially set until substitute charge set.
MAY/JUN	28 day period ends 1 May. - If authority accepts cap Secretary of State confirms by notice.	Authority has 21 days to set substitute budget reflecting cap. If preceptor, substitute precepts issued	
		to charging authority. Substitute charges set and new bills issued as soon as practicable after substitute budgets made. Charging authorities have to recalculate instalments, benefit, transitional relief. Overpayment by chargepayers refunded.	Receive new lower bills + refunds where appropriate. Benefit etc changes.
	- If authority does not respond Secretary of State sets by Order (Debate in Commons) and confirms by notice.	As above. (June/July)	As above.
	- If authority chall iges, Secretary of State considers case (Ministers may meet authority) and decides whether to set cap at same, higher or lower level than proposed. He also considers whether to impose conditions on authority's expenditure or financial management and, if so, what these should be. Cap set by Order (debate in Commons	As above. (June/July). If conditions imposed authority has to comply with them for remainder of financial year.	As above.

on this and non-responders Order). Cap confirmed by notice. Any

conditions included in notice.

ANNEX B

CHARGE CAPPING: DISAPPOINTED EXPECTATIONS

- 1. The Department has received many representations from conservative MPs, local conservative groups and members of the public pressing for capping in particular cases. Inevitably, if the capping powers are used and these authorities are not capped this is likely to lead to a degree of frustration on the part of the MPs and others concerned.
- 2. Some examples of authorities, the range of charges involved and why the authority is not caught on a criterion of $12\frac{1}{2}$ % and £75 are:

Local Authority	Charge, or charge range if county	Why not caught
Bedfordshire	397 - 414	9.1% and £64ph
Berkshire	359 - 449	9.1% and £62ph
Cheshire	385 - 430	Implied reduction only
Cornwall	311 - 329	6.2% and £42ph
Devon	285 - 395	7.8% and £50ph
Humberside	291 - 384	11.7% and £83ph
Lancashire	299 - 407	11.4% and £81ph

Oxfordshire	376 - 489	Implied reduction only £21
Surrey	295 - 452	7.9% and £45ph
Hackney	499	11.6% and £183 ph*
Harlow	425	Below £15m
Southend	420	39.3% and £45ph
West Oxfordshire	412	-36% and -£31ph
Windsor & Maidenhead	434	37% and £29ph
Wolverhampton	395	7.7% and £72ph

^{*} net of Inner London education grant

ANNEX C

CHARGE CAPPING:
POSSIBLE ANOMALIES

High charges not caught

- (a) Where an authority makes a contribution to the safety net at or near the £75 maximum. Even budgeting in line with SSA would mean a charge of over £350 (£278 + £75). A relatively modest overspend would take authority's charge over £400. Example: Wokingham (charge £434; overspend £7 per adult area overspend £69 per adult), Manchester (charge £425; overspend £46 per adult area overspend £50 per adult).
- (b) Where an authority has a very high SSA a high overspend in £ per adult may not represent a high percentage overspend. Example: Hackney (charge £499 - overspend 11.7% and £183 per adult; area overspend per adult £184 - all overspend figures net of inner London education grant).
- (c) Where the district is under the £15m threshold and the county is not caught. <u>Examples</u>: Oxford (charge £489; overspend £23 per adult - area overspend £119 per adult); Epsom and Ewell (charge £452; overspend £64 per adult - area overspend £109 per adult).

Lower charges caught

(d) Where an authority's charge is much lower than that implied by its budget because it benefits substantially from transitional support (area safety net, inner London education grant or low rateable value areas grant). <u>Examples</u>: Calderdale (charge £297; transitional support £163 per adult (safety net £138)

per adult, LRV areas grant £25 per adult); overspend per adult £160 - area overspend per adult £172). Greenwich (charge £408; transitional support £285 per adult (safety net £212 per adult, inner London education grant £73 per adult); overspend per adult £314 - area overspend per adult £315 - all overspend figures net of inner London Education grant).

Charges below assumed charge caught

(e) An authority may be capped even though the charge set is below the assumed charge. The latter (and the spending assumption on which it is based) does not represent a target or guideline or an amount which an authority could or should set or spend. It is simply a reference point for the calculation of an appropriate degree of protection under the safety net and transitional relief scheme. The SSA represents an appropriate level of spending. The only case in this category is Haringey (actual charge £572.89; assumed charge £573.17; overspend above SSA 29.8% and £351 per adult - area overspend £352 per adult).

Chargepayers worse off because of capping

(f) Charge capping could result in a chargepayer, after taking account of community charge benefit, having to pay more, not less, to his local authority. These circumstances arise because of the de minimis rule in the benefit regulations which provides that where but for this rule benefit entitlement would be less than 50p per week, the entitlement is set to 0. Thus capping could leave the chargepayer some £26 worse off for the year.

Similar capped charges reduced by different amounts

the relationship between budgets and charges is indirect and obscured by transitional arrangements in particular, because the amount by which budgets (and therefore charges) are reduced must reflect the individual circumstances of the capped authority and be realistic and achievable and because no authority can in any event be capped below the level implied by the higher of the two criteria (if a combined criterion) or £15m (the statutory threshold below which authorities are exempt from capping) whichever is the higher.

DEPARTMENT OF THE ENVIRONMENT 26 March 1990

ANNEX D

SELECTION CRITERIA

- 1. Authorities can be selected for charge capping if in my opinion their budgets are either excessive or represent an excessive increase over the previous year, but I am not empowered to select any authority whose budget is below a threshold of £15m. Selection must be on the basis of general principles but I may adopt different principles for different classes of authorities (eg shire districts, county councils) where there are reasoned grounds for doing so.
- 2. To minimise the risk of successful legal challenge I am proposing to judge the excessiveness of authorities' budget by reference to their standard spending assessments (SSAs) the amount for each authority which in our view is the appropriate level of spending for the authority to provide a standard level of service consistent with total standard spending of £32.8bn. This approach is broadly analagous to that adopted under rate capping where authorities were selected if their budgets were judged excessive by reference to their Grant Related Expenditure assessments (GREs) which SSAs have replaced in the new system.
- 3. The measure of excessiveness I am proposing is a joint percentage/per capita measure. This twofold test means that an authority is capped only if its overspend on SSA results in a significant burden on charge payers and if it is significant relative to the size of its budget. A per capita approach by itself would not be an adequate measure of overspend relative to the budget concerned, and would be difficult to defend in litigation if it represented only a small percentage overspend. The 12½% criterion in my proposed options is the tried and tested figure used in the last few rounds of rate capping.

- 4. I am not proposing to use different criteria for different classes of authority (subject to special arrangements to allow for the abolition of ILEA see paragraph 6 below, and for the City of London in recognition of its special circumstances of having a local business rate). This will minimise the risk of legal challenge to selection. If we were to adopt different criteria for different classes (eg cap a county council if it was overspending by £90 per adult and a district if it were overspending by £10 per adult in recognition of the relative sizes of the authorities' budgets) I believe that it would be impossible to rebut the argument that it was illogical and unfair to allow one class of authority to impose a greater burden on chargepayers than another class before we were prepared to cap.
- Likewise to minimise the risk of successful legal challenge I do not intend to use my power to select authorities whose budgets represent an excessive increase over the previous year. To use this option for next year we would have to rely on notional budget figures (ie the budget which would have been set had the new system been in operation in 1989/90) for individual authorities for 1989/90 as the baseline for measuring increases in 1990/91 budgets. we have indeed calculated such notional figures for the area safety net and transitional relief scheme, I do not believe they are sufficiently robust for capping purposes. Given the penal nature of capping it is essential that any notional base is calculated with precision if it is to withstand successful legal challenge. Treasury Counsel has advised that there are significantly more legal risks attached to using the excessive increase option in 1990/91 than adopting the course I am proposing.
- 6. Under my two options for selection criteria, for inner London boroughs I would deduct from each borough's budget for the purposes of comparison with SSA the amount of its inner

London education grant entitlement. This deduction is intended to meet our objective of making an allowance for that part of the ILEA overspend inherited by those boroughs which it would not be reasonable to expect an authority to be able to cut in 1990/91. The amount of the grant would serve as a proxy for the amount of such inherited overspending, which we were prepared to recognise, and would be consistent with the sums approved by Parliament in the Special Grant Report. The individual circumstances of authorities caught by the selection criteria would be taken into account in setting the caps themselves.
