From the Parliamentary Under Secretary of State for Health

The Rt Hon Margaret Thatcher MP

*Prime Minister
I have highlighted the Barnett
figures - especially a middle of the
road performance. See of the variations*

5 September 1989

Dear Prime Minister,

R6/9

*which differs
as very striking.*

RCCG 1/5

HEALTH SERVICE INDICATORS 1987/88

You may recall that on 28 July the Department of Health placed in the House of Commons Library the first instalment of the Health Service Indicators for 1987/88. These provide an excellent window on a variety of aspects of health care. To make them more readily available to you we have had the attached booklet produced which lists the values and rankings for 11 particularly instructive indicators. I make no comment on the figures. Rather, I hope you will find this a useful starting point for discussions with constituency groups and local interests and most particularly with members of your local Health Authority who will be able to fill out the picture presented by these figures with more information on local services.

We are keen to see Health Service Indicators more widely used in discussions about health care services. Analysis of variations between Authorities can only improve our understanding of the way resources are being used and the opportunities for improved management. The critical examination of performance as a routine part of service management will be particularly important in future for those providing and authorities purchasing services in order that the changes detailed in the White Paper should be fully effective.

In the past Indicators have also been used to compare figures for the same Authority over time. You will recall that the book, Comparing Health Authorities, published by the Department in April 1988, gave examples of this type of analysis. The Indicators listed in the attached booklet are the first to be based on the new statistics produced as a result of the Korner review of health service information. This set is therefore not directly comparable with those for earlier years. Comparison between years will have to await the publication of the indicators for 1988/89 early next year.

I hope you find this information helpful. If you have any questions on particular indicator values may I suggest you take them up with your Health Authority.

*Yours sincerely
Roger Freeman*

C O N T E N T S

INTRODUCTION AND NOTES ON PRODUCTION OF HEALTH SERVICE INDICATORS

VALUES AND RANKINGS FOR:

Ref.	Indicator	Specialty
1. DC51	Day care places per 1000 District residents	Mental Illness
2. DC51	Day care places per 1000 District residents	Mental Handicap
3. HA63	Day cases as % of all admissions	General surgery/urology
4. HB01	Treatment cost per consultant episode	General surgery/urology
5. HB01	Treatment cost per consultant episode	All medical specialties other than paediatrics
6. HB61	Throughput per 366 bed days	General surgery/urology
7. HB61	Throughput per 366 bed days	All medical specialties other than paediatrics
8. ML61	Standardised Mortality Ratios	All causes, all ages
9. NB62	Neonatal mortality rate	
10. TH41	% of scheduled theatre sessions cancelled	General surgery/urology
11. WL49	% of patients waiting at 31 March 1988 who had waited 1 year or longer	General surgery

SOME KEY HEALTH SERVICE INDICATORS FOR 1987/88

INTRODUCTION

This booklet is being supplied to MPs to give you access to some of the more significant Health Service Indicators which were published in July.

Health Service Indicators are made available to Health Authorities free of charge and may be purchased by anyone. They are provided on floppy disks for access by computer. Sets, including those published in July, can be analysed using the computer in the House of Commons Library. It is hoped that MPs will use this to look at more of the Health Service Indicators for 1987/88.

The Indicators need to be interpreted carefully. Their purpose is to help Health Service planners, policymakers and service providers to better understand the work being done by their Authority by comparing information collected on it with that for other Districts. There will often be good reasons why costs are high in one District compared with others or why the average length of District spells is comparatively long. It is hoped that MPs will talk to their District Health Authorities and discuss these Indicators and from them get a better understanding of local problems and creditable achievements.

HOW ARE HEALTH SERVICE INDICATORS (HSIs) PRODUCED?

Most HSIs are a by-product of data supplied by Health Authorities to OPCS and DoH for other purposes. A small proportion is collected specifically for Indicators. Departmental computer staff then combine data from a wide variety of sources to produce the Indicators requested by joint working groups of Departmental and NHS staff. Thus the Indicator for Average Treatment Cost per Consultant Episode is a finance figure (total treatment cost for a specialty in a year to 31 March) divided by a hospital activity figure (number of finished consultant episodes in the specialty).

Having calculated the ratios, the figures are ranked and a percentage ranking produced. Since for most indicators there are 199 values (one for each District and each Special Health Authority), if an Authority is ranked 10% it usually shares the ranking with another Authority. A 10% ranking can be interpreted as 10% of Authorities have a similar or lower

value for this Indicator. 91% means 10% have a similar or higher value.

Once the values and rankings have been calculated subcontractors produce master disks of the access computer programs and their data files.

In September the full set of 1987/88 Indicators will be made available for BBC microcomputers (widely used by Health Authorities) and in Graphical and Advanced versions for IBM compatible computers.

* For some of the indicators there will be Authorities for which a value and ranking has not been given. In some cases this is because the District does not provide treatment in the particular specialty. In others the omission is due to data collection or processing problems.

HA63Z011

Percentage of all admissions that were Day Cases (General Surgery/Urology)

Use of day case treatment rather than admission to a hospital bed is an increasing element of good medical practice for many specialties as well as a more efficient use of resources.

High value is "good" end of spectrum.

TABLE 8 (page 1)

ML61Z

Standardized Mortality Ratios, all causes,
all ages

Influenced not only by health care, but also by socio-economic and other factors, an important comparative measure of the health of the local population. Actual death rates related to expected death rates for the District standardized for age and sex of local population.
Low value is "good" end of spectrum.

TH41011 Percentage of Theatre Sessions Cancelled
(General Surgery/Urology)

High rate of cancellation may indicate poor planning and management of theatre resources - to be interpreted with other theatre Indicators. May be a factor in Throughput and other Indicators.

Low value is "good" end of spectrum.
