

MR MORRIS

Arnold Weinstock telephoned me this evening on an environmental point.

When a car is being filled up with petrol quite a number of noxious fumes escape into the atmosphere and end up adding to the damage to the ozone layer. In most of the United States it is now compulsory to fit a device to petrol pumps which filters out these fumes. It would be an earnest of our determination to combat damage to the environment if we were to introduce something similar here.

Surprise, surprise, GEC just happen to manufacture these devices so Arnold (even Arnold) feels constrained from launching such an initiative himself. But he thinks it would be an excellent idea if someone else were to do so! We might consider how this should be taken forward, if at all.
